

November 2, 2020

To whom it may concern,

Please consider this as a letter of recommendation for Brandon Winn as a potential candidate for a job position in your company. Brandon was a student in my Operating Systems class at California State University Long Beach in Spring 2020. Operating Systems is an upper-division class for students majoring in computer science in which students learn the theory and practice on processes, threads, scheduling, memory management, virtual memory, concurrency control, as well as deadlock handling.

During his time in my class, Brandon demonstrated a strong work ethic and ability to pick up on new skills quickly. He had developed programs that, when execute, require interprocess communications through shared memory or message passing, as well as programs on multiple operating systems including Windows and several Linux distributions. He had also written a program that simulates the process and memory management functions in operating systems.

Brandon has shown exceptional problem-solving on his own and in settings with his peers. He has taken initiative in class by encouraging struggling students and providing support with the content. Outside of class, he tutored students in the Engineering Success Center where he provided mentorship. He effectively conveys complex topics to his peers in a way that is respectful and easy to understand. His most valuable contribution to the class was his ability to help others.

Thank you for taking the time to read this letter. Should you have questions, please do not hesitate to contact me at shui.lam@csulb.edu.

Sincerely,

Shui Lam, Ph.D.

Professor, Department of Computer Engineering and Computer Science
California State University, Long Beach
